

SoundWave

Music Streaming Platform

Business Intelligence Dataset

Context

SoundWave is a fictional music streaming platform, comparable to services like Spotify or Deezer. Launched in 2020, it offers a vast music catalogue spanning all genres: Pop, Rock, Hip-Hop, Electronic, Jazz, Classical, R&B, Metal, Country, Reggae, Latin, Folk, Blues and Indie.

The platform features several hundred international artists, hundreds of albums and thousands of tracks. Users can subscribe through different plans (Free, Premium, Family, Student) and create personalized playlists. The data includes subscriber listening history, weekly charts by country and revenue generated through royalties paid to artists.

This dataset reflects the key challenges of the digital music industry: monetizing streams, discovering new artists, understanding user listening habits and the economics of streaming.

Data Sources

File	Format	Description
genres.csv	CSV	Music genres with descriptions
artists.xlsx	Excel	Artists with country of origin and primary genre
albums.csv	CSV	Discography with release date and label
tracks.xlsx	Excel	Track catalogue with duration and popularity
subscribers.csv	CSV	Subscriber base with plan type and country
listening_history.txt	Text	Listening history by user
playlists.csv	CSV	Playlists with follower count
charts.xlsx	Excel	Weekly charts by country
royalties.csv	CSV	Revenue and royalties by artist/track
annual_report_2024.pdf	PDF	Annual report with music trends

Scope of Analysis

This dataset allows you to analyze listening trends by genre and country, user behavior by subscription type, the popularity of artists and tracks through chart rankings, and the streaming economy via royalties and generated revenue.

It provides an ideal playground for understanding the mechanics of the digital music industry and exploring the relationships between music offerings, consumption habits and the commercial performance of a streaming platform.
